

Figure 3. Violin plot and box plots for the distribution of conservation features based on robust z-scores for genic and matched non-genic regions. A&B) PhyloP evolutionary conservation scores for the 241way placental mammal and 100 way vertebrate alignments respectively. C&D) GERP evolutionary conservation scores for a 91 way eutherian mammal and 63 way amniote vertebrate alignments respectively. The signed Kolmogorov-Smirnov statistics and adjusted p-values are displayed under each comparison.
