

Copies

lncRNA(+)

Supplementary Figure S10. lncRNA copies robust z-scores distributions in log scale. A-C) Histogram, Density and Boxplot for lncRNA(+), D-F) Histogram, Density and Boxplot for lncRNA(-). The positive dataset shows log (robust z-scores) centered around 0.1 which also applies for the negative set. It is important however to highlight that there is greater spread for negative set compared to the positive set, which indicates the two dataset come from different distributions
