

Methylome

mRNA(+)

Supplementary Figure S7. mRNA methylome robust z-scores distributions in log scale. A-C) Histogram, Density and Boxplot for mRNA(+), D-F) Histogram, Density and Boxplot for mRNA(-). The positive dataset shows robust z-scores centered around 0.5 and the robust z-scores for the negative set are centered around 0, this indicates that the two datasets come from different distributions. *Note: These distributions highlight the presence of two z-score peaks, which are also distinguished in the main paper figure (Fig 4).
